So, for performing this high voltage testing, a standard voltage wave is applied. This standard voltage may not have any similarity in height and shape with the actual impulse voltage due to lightning or surges. In Britain in BSS 923 : 1940, the standard testing wave is expressed as  $1/50$  sec which means, the voltage rises to its peak within 1 micro second and fall to 50% of its peak value ...
