Test-Driven Development inverts this process by using a test-first approach. So long as the requirements are provided, the developer always first writes the unit tests. Afterwards, the developer then writes the code necessary to succeed at the tests. As a result, the code should always meet the software requirements and generally be simpler and 'cleaner'. Additionally, the developer only wrote code for what was actually needed. Therefore, you end up with effective software ...

In this blog post we'll start from an empty project and show how test driven development may look like on the iOS platform. What's TDD all about? By utilizing TDD, you are first writing tests (that initially fail), and after that you develop code which makes the tests pass. Once you have the working code, you may wish to refactor it in order to comply with coding standards. This ensures that your app is testable, tested, and it generally improves app quality. You let tests drive your app ...
